

Bulletin

NO.: 23-008
DATE: January 11, 2023
TO: All Personnel
FROM: Roger Fisher, Deputy Chief, Metro Zone Emergency Command and Data Center
SUBJECT: Alert 2 Nature/Problem

Beginning January 15, the Nature/Problems “Alert 2 Still Alarm” and “Alert 2 Brown/Montgomery” will be eliminated and replaced with “Alert 2”. The response plans for the respective airports will not be changing. Appropriate resources will be dispatched based on the location premise for each airport.

As a reminder, the initial dispatch for San Diego International Airport (SDIA) will remain a BC, R1, R2, R3, and M63. If more off-field units are needed, the on duty ARFF captain has the discretion to upgrade the response to a complete Alert 2. The Nature/Problem will remain “Alert 2” with the additional units listed on the MDC.

This new process for “Alert 2” is identical for escalating a structure fire from a 1st alarm to a 2nd alarm. The Nature/Problem will remain the same and the additional units will be listed on the MDC. The new Alert 2 call process will reduce dispatching errors and call-processing time.
